

ABOUT THE SELECTION CHART

Beman's selection charts are regularly updated to reflect the latest in bow performance. For 2019, we have made a few adjustments to certain size recommendations based on increased bow efficiencies and more aggressive cam profile developments. Please read the latest chart and guidelines before selecting arrow shafts based on prior experience.

ADJUSTING THE CHART TO YOUR BOW SET UP

The Hunting Chart is based on Bow Speed Rating of 301-340 FPS and 100-grain points. If you set-up is different, make the following adjustments to your bow weight.

BOW SPEED RATING:

Up to 300 FPS	Subtract 5 lbs of bow weight
341-350 FPS	Add 5 lbs of bow weight
351 FPS or higher	Add 5 lbs of bow weight

*POINT WEIGHT:

75 grain	Subtract 3 lbs of bow weight
125 grain	Add 3 lbs of bow weight
150 grain	Add 6 lbs of bow weight

NOTE: If your arrow shaft is over 1/2" more than the closest inch column shown on chart, round up to the next inch column. Example, if arrow length is 28-1/2", use the 29" column. *Arrow sizing calculated with 100 gr. point weight.
